Application/Control Number: 10/622,249

Art Unit: 1621

Claims 1 and 3-16 are pending in the instant application.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 and 3-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hernandez et al, US 6,235,795, in view of Granja et al., 5,663,156, further in view of Friedman, US 6,423,697. Applicants' arguments and amendments have been gtive due consideration but are found non-persuasive for the reasons of record. Granja et al., for similar mixtures of alcohols, disclose treating inflammatory and cholesterol disorders as well as ulcers. Applicants' ranges continue to overlap those of Hernandez et al. Grinding the alcohols into particles before extraction would be obvious engineering practice inasmuch as having smaller particles increases the surface area for extraction. Applicants have shown no difference in the final product produced. Friedman, newly

cited, discloses micronization to be standard pharmaceutical practice noting that active agents are "added to the cream or ointment base as a micronized powder or in some ijnstances as a solution" (s. Col. 6, II. 38-42).

No claim is allowed.

Any inquiry concerning this communication should be directed to Peter G. O'Sullivan at telephone number (571)272-0642.
